1. INTRODUCTION

1.1 Safety Precautions

**CAUTION:** READ ALL SAFETY WARNINGS BEFORE INSTALLING, MAKING CONNECTIONS, OR SERVICING THIS EQUIPMENT. FAILURE TO COMPLY WITH THESE WARNINGS COULD RESULT IN PERSONAL INJURY AND/OR PROPERTY DAMAGE. RETAIN ALL INSTRUCTIONS FOR FUTURE REFERENCE.

- Verify that the input voltage range printed on the data label matches the local AC power to be used.
- Make sure that the power cord does not pose a potential obstacle or tripping hazard.
- Use only approved accessories and peripherals.
- Operate the equipment only under ambient conditions specified in these instructions.
- Disconnect the equipment from the power supply when cleaning.
- Do not operate the equipment in hazardous or unstable environments.
- Do not immerse the equipment in water or other liquids.
- Service should only be performed by authorized personnel.
- The T71XW is supplied with a grounded power cable. Use only with a compatible grounded power outlet.

1.1.1 Relay Option Safety Precautions

This equipment may have an optional AC or DC Relay Option board installed. This option allows external devices to be controlled by the equipment.

**WARNING:** ELECTRICAL SHOCK HAZARDS EXIST WITHIN THE HOUSING. THE HOUSING SHOULD ONLY BE OPENED BY AUTHORIZED AND QUALIFIED PERSONNEL. REMOVE ALL POWER CONNECTIONS TO THE UNIT BEFORE OPENING. IF THE UNIT CONTAINS AN OPTIONAL RELAY CONTROL BOARD, ADDITIONAL AC OR DC POWER CONNECTIONS MAY STILL EXIST WITHIN THE HOUSING.

Before making connections to the Relay terminals, remove power from the system. If the system contains an optional rechargeable battery system, be sure to use the ON/ZERO Off button to fully turn off the system after removing the AC power plug.

More detailed installation instructions are included with the Relay Option Kit.

#### Primary Function (Short Press)
- **ON/ZERO**: Turn indicator on. Zero the display.
- **PRINT**: Send the displayed value to the COM port.
- **FUNCTION**: Initiate the function of the current application mode.
- **TARE**: Perform a tare operation.
- **LIBRARY**: Display the library data.

#### Secondary Function (Long Press)
- **Off**: Turn indicator off.
- **Units**: Change the weighing unit.
- **Mode**: Change the application mode.
- **Menu**: Enter the menu. View the Audit Trail event counters (extended press).
- **Edit**: Enable editing the current library record.

#### Menu Function (Short Press)
- **Yes**: Accept the current menu or setting.
- **No**: Advance to the next menu or setting. Increment the displayed value.
- **Back**: Go back to the previous menu or setting. Decrement the displayed value.
- **Exit**: Exit the menu. Abort the calibration in progress.

#### Library Function (Short Press)
- **Yes**: Accept the current setting.
- **No**: Advance to the next library or setting. Increment the displayed value.
- **Back**: Go back to the previous library or setting. Decrement the displayed value.
- **Exit**: Exit the library.

<td>+/-</td>
</tr>
</tbody>
</table>

#### Primary Function (Short Press)
- **1**: Enter 1 on the display.
- **2ABC through 9WXYZ**: Enter alphanumeric values on the display using the multi-tap text entry method.
- **.:.-**: Enter decimal point, space or dash on the display.
- **0**: Enter 0 on the display.
- **CLR**: Clear the last character from the display.

#### Secondary Function (Long Press)
- **Ts2**: Change the display between Scale 1 and Scale 2.
- **Info**: Show the Accumulation statistics on the display.
- **+/-.**: Change the polarity of the displayed value.
2. INSTALLATION

2.1 Unpacking
Unpack the following items:
- T71P or T71XW indicator
- Capacity label sheet
- AC power cord (T71P only)
- Sealing kit
- Mounting bracket
- Instruction manual CD
- Knobs (2)
- Warranty card

2.2 External Connections

2.2.1 Scale Base with Connector to T71P
Ohaus bases with a circular connector can be attached to the external load cell connector (Figure 1-1, item 13). Refer to Section 2.3.2 for bases without a connector.

To make the connection, plug the base’s connector onto the external load cell connector, and then rotate the locking ring clockwise.

2.2.2 Scale Base with Connector to T71XW
To connect an Ohaus base with a circular connector to the T71XW (which does not have an external connector), the Load Cell Cable Adapter Kit p/n 80500736 may be used to make the connection. Only use this attachment method if the system will not be used in a Washdown environment. This cable connects to the terminal block inside the T71XW and has an external connector on the other end.

2.2.3 RS232 Interface Cable to T71P
Connect the optional RS232 cable to the RS232 connector (Figure 1-1, item 11).

<table>

<td>RTS</td>
</tr>
<tr>
<td>9</td>
<td>N/C</td>
</tr>
</tbody>
</table>

Figure 2-1. RS232 Connector

2.2.4 AC Power to T71P
Connect the AC power cord (supplied) to the power receptacle (Figure 1-1, item 16), then connect the AC plug to an electrical outlet.

2.2.5 AC Power to T71XW
Connect the power cord to a properly grounded electrical outlet.

2.2.6 Battery Power to T71P
The T71P indicator can be operated on batteries (not supplied). The indicator will automatically switch to battery power if there is a power failure or the power cord is removed.

Remove the battery cover (Figure 1-1, item 9) and install 6 C-size (LR14) batteries in the orientation shown in the battery compartment. Re-install the battery cover.
During battery operation, the battery symbol indicates the battery charge level. The indicator will automatically turn off when the batteries are fully discharged.

<table>
<thead>

</tr>
<tr>
<td></td>
<td>51 to 75%</td>
</tr>
<tr>
<td></td>
<td>76 to 100%</td>
</tr>
</tbody>
</table>

2.2.7 Mounting Bracket Attachment
Position the wall bracket over the threaded holes on each side of the indicator and install the knobs (See Figures 1-1 and 1-2). Adjust the indicator to the desired angle and tighten the knobs.

2.3 Internal Connections
Some connections require the housing to be opened.

**WARNING:** ELECTRICAL SHOCK HAZARDS EXIST WITHIN THE HOUSING. THE HOUSING SHOULD ONLY BE OPENED BY AUTHORIZED AND QUALIFIED PERSONNEL. REMOVE ALL POWER CONNECTIONS TO THE UNIT BEFORE OPENING. IF THE UNIT CONTAINS AN OPTIONAL RELAY CONTROL BOARD, ADDITIONAL AC OR DC POWER CONNECTIONS MAY STILL EXIST WITHIN THE HOUSING.

2.3.1 Opening the Housing

**T71P**
Remove the four Phillips head screws from the rear housing. Remove the front housing being careful not to disturb the internal connections. Once all connections are made, reattach the front housing.

**T71XW**
Remove the four 8mm hex head bolts from the rear housing. Open the housing by carefully pulling the front housing forward. Once all connections are made, reattach the front housing. Tighten the bolts to 2.5 N m (20-25 in lb) torque to ensure a watertight seal.

2.3.2 Scale Base without Connector to T71P or T71XW

Bases without a circular connector must be attached to one of the internal load cell connectors on the main pc board. Pass the load cell cable through a cable gland (Figure 1-1, item 14 or Figure 1-2, item 11 or 12) and attach it to terminal block J4 (Figure 1-3, item 9) or terminal block J7 (Figure 1-3, item 5). Tighten the cable gland to secure the cable and maintain a tight seal.

</tr>
</tbody>
</table>
### Jumper connections
When a 4-wire load cell is attached to terminal block J4, jumpers W1 and W2 must be installed.
When a 4-wire load cell is attached to terminal block J7, jumpers W3 and W4 must be installed.
When a 6-wire load cell is attached to terminal block J4, jumpers W1 and W2 must be removed.
When a 6-wire load cell is attached to terminal block J7, jumpers W3 and W4 must be removed.

#### 2.3.3 RS232 Interface Cable to T71XW
Pass the optional RS232 cable through the cable gland (Figure 1-2, item 14) and attach it to the terminal block J5 (Figure 1-3, item 2). Tighten the cable gland to secure the cable and maintain a tight seal.

<table>

</tr>
</tbody>
</table>

#### 2.3.4 Footswitch to T71P or T71XW
Pass the optional footswitch cable through the cable gland (Figure 1-1, item 12 or Figure 1-2, item 13) and attach it to the terminal block J9 (Figure 1-3, item 3). Tighten the cable gland to secure the cable and maintain a tight seal.

#### 2.3.5 T71P Housing Orientation
The T71P is delivered in the wall mount orientation, with connections exiting below the display. The rear housing may be reversed so the connections exit above the display. This orientation is convenient when the T71P is placed horizontally on a bench. To reverse the rear housing, remove the four Phillips head screws, carefully rotate the housing 180° and re-install the screws.

![Figure 2-3. Wall Mount Configuration](image)

![Figure 2-4. Bench Top Configuration](image)

#### 2.3.6 Mounting Bracket
Attach the bracket to a wall or table using fasteners (not supplied) that are appropriate for the type of mounting surface. The bracket will accommodate up to 6 mm (1/4") diameter screws. Locate the mounting holes as shown in Figure 2-5.

![Figure 2-5. Mounting Bracket Dimensions](image)

### 3.2 Menu Navigation

The following method is used to navigate the menu and change the settings.

Enter the menu by pressing and holding **Menu** until **MENU** is displayed.
- Press **No** to move to the next menu or press **Back** to move to the previous menu.
- Press **Yes** to enter the displayed menu.

After entering the desired menu,
- Press **No** to move to the next menu item or press **Back** to move to the previous menu item.
- Press **Yes** to enter the displayed menu item.

After entering the desired menu item,
- Press **No** to move to the next setting or press **Back** to move to the previous setting.
  For menu items with numeric or alphanumeric settings, use the keypad to enter the desired value.
- Press **Yes** to accept the displayed setting.

Press **Exit** to immediately exit the menu at any time.

The example below shows how to change the language to **SPANISH**.

![Diagram showing menu navigation and language change process](attachment:image.png)
3.3 Calibration Menu

When CALIBRATION is displayed, press Yes to accept the Calibration menu.
Press No to advance to the desired menu item.

NOTES: Before entering the Zero, Span, 3 Point Linearity or 5 Point Linearity menu items, remove all load from the scale.
If DUAL SCALE is set to OFF, the ZERO, SPAN, 3PTLIN, 5PTLIN menu items are displayed.
If DUAL SCALE is set to ON, the ZERO1, ZERO2, SPAN1, SPAN2, 3PTLIN1, 3PTLIN2, 5PTLIN1, 5PTLIN2 menu items are displayed, where the number represents the scale number.

3.3.1 Zero Calibration
Use this calibration method to adjust the zero calibration point, without affecting the span or linearity calibration.

With no load on the scale, press Yes to set the new zero calibration point.

The display shows --C--, then DONE and returns to the current application mode.

3.3.2 Span Calibration
Use this calibration method to adjust the zero calibration point and span calibration point, without affecting the linearity calibration.

With no load on the scale, press Yes. The display shows the current span calibration point and calibration unit of measure.

NOTES: To change the span calibration point, press No and enter the value using the keypad. Then press Yes.
To change the calibration unit of measure, press No to alternate between kg and lb.

Place the specified calibration weight on the scale and press Yes.
The display shows --C--, followed by the zero calibration point.

With no load on the scale, press Yes.

The display shows --C--, then DONE and returns to the current application mode.
3.3.3  3 Point Linearity Calibration
Use this calibration method to adjust the zero calibration point, 1/2 and full load calibration points.

With no load on the scale, press Yes. The display shows the current full load calibration point and calibration unit of measure.

NOTES: To change the full load calibration point, press No and enter the value using the keypad. Then press Yes.
To change the calibration unit of measure, press No to alternate between kg and lb.

Place the specified full load calibration weight on the scale and press Yes. The display shows --C--, followed by the 1/2 load calibration point.

Place the specified 1/2 load calibration weight on the scale and press Yes. The display shows --C--, followed by the zero calibration point.

With no load on the scale, press Yes. The display shows --C--, then DONE and returns to the current application mode.

3.3.4  5 Point Linearity Calibration
Use this calibration method to adjust the zero calibration point, 1/4, 1/2, 3/4 and full load calibration points.

With no load on the scale, press Yes. The display shows the current full load calibration point and calibration unit of measure.

NOTES: To change the full load calibration point, press No and enter the value using the keypad. Then press Yes.
To change the calibration unit of measure, press No to alternate between kg and lb.

Place the specified full load calibration weight on the scale and press Yes. The display shows --C--, followed by the 3/4 load calibration point.

Place the specified 3/4 load calibration weight on the scale and press Yes. The display shows --C--, followed by the 1/2 load calibration point.
Place the specified 1/2 load calibration weight on the scale and press **Yes**. The display shows --C--, followed by the 1/4 load calibration point.

Place the specified 1/4 load calibration weight on the scale and press **Yes**. The display shows --C--, followed by the zero calibration point.

With no load on the scale, press **Yes**. The display shows --C--, then DONE and returns to the current application mode.

### 3.3.5 Calibration Test

Calibration Test is used to compare a known calibration weight against the stored span calibration data.

With no load on the scale, press **Yes**. The display shows the zero load calibration point.

With no load on the scale, press **Yes**. The display shows --T--, followed by the full load calibration point.

Place the specified full load calibration weight on the scale and press **Yes**. The display shows --T--, followed by difference between the calibration weight and the stored calibration data.

After 5 seconds, the display returns to the current application mode.
3.3.6 Geographical Adjustment Factor
Geographical Adjustment Factor (GEO) is used to adjust the calibration based on the current location. Refer to Section 6, Table 6-1 and set the GEO factor that corresponds to your location.

Settings from 1 to 31 are available.

Press the No or Back button to change the value. Press Yes to accept the value.

**NOTE:** Only an authorized manufacturer’s representative or certified verification personnel may make these changes. Changing the geographical setting alters the calibration values.

3.3.7 End Calibration
Press Yes to advance to the next menu or No to return to the top of the current menu.

3.4 Setup Menu
When the indicator is used for the first time, enter this menu to set the Range, Capacity and Graduation values. If the indicator comes as part of a bench scale, these values were already set in the factory.

**NOTE:** If two scales will be operated, set DUAL SCALE to ON and set the Range, Capacity and Graduation values for both scales. The Range1, Capacity1 and Graduation1 values are set for Scale 1, which is connected to the circular connector (Figure 1-1, Item 8) or terminal block J4 (Figure 1-3, Item 9) on the main pc board. The Range2, Capacity2, and Graduation2 values are set for Scale 2, which is connected to the terminal block J7 (Figure 1-3, Item 5) on the main pc board. All other Setup Menu settings apply to both scales.

3.4.1 Reset
Reset the Setup menu to the factory defaults. Factory default settings are shown in bold.

**NOTE:** If DUAL SCALE is set to OFF, RANGE, CAPACITY and GRADUATION menu items are displayed.

3.4.2 Dual Scale
Set the status of the second scale input (Scale 2).

**NOTES:** If DUAL SCALE is set to OFF, the RANGE, CAPACITY and GRADUATION menu items are displayed.
If DUAL SCALE is set to ON, the RANGE1, RANGE2, CAPACITY1, CAPACITY2, GRADUATION1 and GRADUATION2 menu items are displayed, where the number represents the scale number.

3.4.3 Range 1
Set the number of weighing ranges for Scale 1.

**NOTE:** If DUAL SCALE is set to OFF, RANGE is displayed instead of RANGE 1.
3.4.4  Range2
Set the number of weighing ranges for Scale 2.

<table>
<thead>
<tr>
<th>SINGLE</th>
<th>DUAL</th>
</tr>
</thead>
<tbody>
<tr>
<td>= one weighing range from zero to capacity.</td>
<td>= two weighing ranges.</td>
</tr>
<tr>
<td></td>
<td>The fine range (1r) is from zero to half capacity.</td>
</tr>
<tr>
<td></td>
<td>The coarse range (r2) is from half capacity to full capacity.</td>
</tr>
</tbody>
</table>

3.4.5  Capacity1
Set the capacity of Scale 1 using the numeric keypad.

Settings from 1 to 999999 are available.

**NOTE:** if DUAL SCALE is set to OFF, CAPACITY is displayed instead of CAPACITY1.

**NOTE:** If DUAL was selected as the Range1 setting, the Capacity1 setting defines the capacity of the coarse range. The capacity of the fine range is automatically defined as half of the Capacity1 setting. For example, if the Capacity1 setting is 15, the capacity of the fine range is 7.5 and the capacity of the coarse range is 15.

After the capacity is set, select the primary unit.

<table>
<thead>
<tr>
<th>kg</th>
<th>lb</th>
</tr>
</thead>
<tbody>
<tr>
<td>= the primary unit is kilograms.</td>
<td>= the primary unit is pounds.</td>
</tr>
</tbody>
</table>

3.4.6  Capacity2
Set the capacity of Scale 2 using the numeric keypad.

Settings from 1 to 999999 are available.

**NOTE:** If DUAL was selected as the Range2 setting, the Capacity2 setting defines the capacity of the coarse range. The capacity of the fine range is automatically defined as half of the Capacity2 setting.

After the capacity is set, select the primary unit.

<table>
<thead>
<tr>
<th>KILOGRAM</th>
<th>POUND</th>
</tr>
</thead>
<tbody>
<tr>
<td>= the primary unit is kilograms.</td>
<td>= the primary unit is pounds.</td>
</tr>
</tbody>
</table>

3.4.7  Graduation1
Set the readability of Scale 1.

Settings of 0.0001, 0.0002, 0.0005, 0.001, 0.002, 0.005, 0.01, 0.02, 0.06, 0.1, 0.2, 0.5, 1, 2, 5, 10, 20, 50, and 100 are available.

**NOTE:** If DUAL SCALE is set to OFF, GRADUATION is displayed instead of GRADUATION1.

**NOTE:** Graduation1 setting selections are dependent on the Capacity1 setting. Selections are limited to values that will provide a scale resolution between 1:1000 and 1:50000.

**NOTE:** If DUAL was selected as the Range1 setting, the Graduation1 setting defines the fine range graduation. The coarse range graduation is automatically defined as one step greater than the Graduation1 setting. For example, if Graduation1 is set to 0.001, the coarse range graduation is defined as 0.002.
3.4.8 Graduation2
Set the readability of Scale 2.

Settings of 0.0001, 0.0002, 0.0005, 0.001, 0.002, 0.005, 0.01, 0.02, 0.05, 0.1, 0.2, 0.5, 1, 2, 5, 10, 20, 50, and 100 are available.

NOTE: Graduation2 setting selections are dependent on the Capacity2 setting. Selections are limited to values that will provide a scale resolution between 1:1000 and 1:50000.

NOTE: If DUAL was selected as the Range1 setting, the Graduation2 setting defines the fine range graduation. The coarse range graduation is automatically defined as one step greater than the Graduation2 setting.

3.4.9 Power Unit
Set the unit of measure displayed at startup.

AUTO = last unit in use when the indicator was turned off.
KILOGRAM = kilograms
GRAM = grams
POUND = pounds
OUNCE = ounces
POUND OUNCE = pound ounces
TONNE = tonnes
CUSTOM = custom unit

3.4.10 Zero Range
Set the percentage of scale capacity that may be zeroed.

2% = zero up to 2 percent of capacity.
100% = zero up to 100 percent of capacity.

3.4.11 Auto Tare
Set the automatic tare functionality.

OFF = automatic tare is disabled.
ON = the first stable gross weight is tared.
ACCEPT = in Check weighing mode, stable gross loads within the accept limits are tared.

When ACCEPT is selected, set the delay time.

OFF = automatic tare takes affect as soon as the weight is stable.
0.5 = automatic tare takes affect after the weight is stable for 0.5 second.
1 = automatic tare takes affect after the weight is stable for 1 second.
2 = automatic tare takes affect after the weight is stable for 2 seconds.
5 = automatic tare takes affect after the weight is stable for 5 seconds.
3.4.12 Accumulate
Set the accumulate functionality.

OFF = accumulation is disabled.
MANUAL = the displayed value is manually added to the total by pressing the FUNCTION button.
AUTO = the displayed value is automatically added to the total when the display becomes stable.

3.4.13 Retain Zero
Set the Retain Zero functionality.

OFF = Retain Zero is disabled.
ON = when power is turned on, the displayed weight is based on the last stored zero (Zero button or "Z" command).

3.4.14 Legal For Trade
Set the legal for trade status.

OFF = standard operation.
ON = operation complies with weights and measures regulations.

NOTE: When Legal for Trade is set to ON, the Menu settings are affected as follows:
- Calibration functions are hidden except for Calibration Test.
- Capacity is read-only.
- Range, Graduation, Power On unit, Auto-Tare, Retain Zero, Gross Indication, Print Output, Unit and Mode settings are locked at their current settings.
- Zero Range is locked at 2%.
- Stable Range is locked at 1d.
- Auto-Zero Tracking is set to 0.5d.
- Continuous Print is disabled.
- IP and CP RS232 commands are disabled.

3.4.15 Beep Volume
Set the beeper volume.

OFF = the beeper is disabled.
LOW = the beeper volume is soft.
HIGH = the beeper volume is loud.

3.4.16 Beep Signal
Set how the beeper responds in Check Weighing mode.

OFF = the beeper is disabled.
ACCEPT = the beeper sounds when the weight is within the accept range.
UNDER = the beeper sounds when the weight is below the Under setting.
OVER = the beeper sounds when the weight is above the Over setting.
UNDER-OVER = the beeper sounds when the weight is below the Under setting or above the Over setting.
3.4.17 **Key Beep**
Set whether the beeper sounds when a button is pressed.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFF</td>
<td>no sound</td>
</tr>
<tr>
<td>ON</td>
<td>sound</td>
</tr>
</tbody>
</table>

3.4.18 **Library**
Set whether the library memory is enabled.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFF</td>
<td>data cannot be stored in the library memory.</td>
</tr>
<tr>
<td>ON</td>
<td>data can be stored in the library memory.</td>
</tr>
</tbody>
</table>

3.4.19 **Alibi**
Set whether the alibi memory is enabled.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFF</td>
<td>alibi records are not stored in the alibi memory.</td>
</tr>
<tr>
<td>ON</td>
<td>alibi records are stored in the alibi memory.</td>
</tr>
</tbody>
</table>

**NOTE:** The Alibi menu item is only displayed if the Alibi Memory Option is installed.

3.4.20 **End Setup**
Advance to the next menu or return to the top of the current menu.

3.5 **Readout Menu**
Enter this menu to customize display functionality.

3.5.1 **Reset**
Reset the Readout menu to the factory defaults. Factory default settings are shown in bold.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NO</td>
<td>not reset</td>
</tr>
<tr>
<td>YES</td>
<td>reset</td>
</tr>
</tbody>
</table>

3.5.2 **Language**
Set the language for menus and displayed messages.

<table>
<thead>
<tr>
<th>Language</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGLISH</td>
<td>English</td>
</tr>
<tr>
<td>SPANISH</td>
<td>Spanish</td>
</tr>
<tr>
<td>FRENCH</td>
<td>French</td>
</tr>
<tr>
<td>GERMAN</td>
<td>German</td>
</tr>
<tr>
<td>ITALIAN</td>
<td>Italian</td>
</tr>
</tbody>
</table>
### 3.5.3 Stable Range
Set the amount the reading can vary while the stability symbol remains on.

- **0.5 d** = 0.5 graduations
- **1 d** = 1 graduation
- **2 d** = 2 graduations
- **3 d** = 3 graduations
- **5 d** = 5 graduations

**NOTE:** When LEGAL FOR TRADE is set to ON, the setting is forced to 1 d. The setting is locked when the Security Switch is set to the ON position.

### 3.5.4 Filter
Set the amount of signal filtering.

- LOW = faster stabilization time with less stability.
- MEDIUM = normal stabilization time with normal stability.
- HIGH = slower stabilization time with more stability.

### 3.5.5 Auto Zero Tracking
Set the automatic zero tracking functionality.

- OFF = disabled.
- **0.5 D** = the display maintains zero until a drift of 0.5 graduation per second is exceeded.
- **1 D** = the display maintains zero until a drift of 1 graduation per second is exceeded.
- **3 D** = the display maintains zero until a drift of 3 graduations per second is exceeded.

**NOTE:** When Legal for Trade is set to ON, the setting is forced to 0.5 D. The 1 D and 3 D settings are still available for applications that permit these settings. The setting is locked at the current setting when the security switch is set to the ON position.

### 3.5.6 Backlight
Set the display backlight functionality.

- OFF = the backlight is always off.
- ON = the backlight is always on.
- **AUTO** = the backlight turns on when a button is pressed, or the displayed weight changes and it turns off after the specified time period.

When AUTO is selected, set the time period.

- **1 MINUTE** = the backlight turns off after 1 minute.
- **2 MINUTES** = the backlight turns off after 2 minutes.
- **5 MINUTES** = the backlight turns off after 5 minutes.
3.5.7 Auto Off Timer
Set the automatic shut off functionality.

- OFF = disabled.
- 1 MINUTE = the indicator turns off after 1 minute of inactivity.
- 2 MINUTES = the indicator turns off after 2 minutes of inactivity.
- 5 MINUTES = the indicator turns off after 5 minutes of inactivity.

3.5.8 Gross Indicator
Set the symbol displayed for gross weights.

- OFF = no symbol is displayed.
- GROSS = the G symbol is displayed.
- BRUTTO = the B symbol is displayed.

3.5.9 End Readout
Advance to the next menu or return to the top of the current menu.

3.6 Mode Menu
Enter this menu to activate the desired application modes.

3.6.1 Reset
Reset the Mode menu to the factory defaults. Factory default settings are shown in bold.

- NO = not reset
- YES = reset

NOTE: When LEGAL FOR TRADE is set to ON, the Mode menu cannot be reset.

3.6.2 Weighing Mode
Set the status.

- OFF = disabled
- ON = enabled

3.6.3 Parts Counting Mode
Set the status.

- OFF = disabled
- ON = enabled
3.6.4 Parts Counting Optimization
When the Parts Counting mode is turned ON, Parts Counting Optimization can be used to automatically adjust the average piece weight (APW). Each time a quantity greater than 1x or less then 3x the previous quantity is placed on the scale, the APW is adjusted.

<table>
<thead>
<tr>
<th></th>
<th>OFF = disabled</th>
<th>ON = enabled</th>
</tr>
</thead>
</table>

3.6.5 Percent Weighing Mode
Set the status.

<table>
<thead>
<tr>
<th></th>
<th>OFF = disabled</th>
<th>ON = enabled</th>
</tr>
</thead>
</table>

3.6.6 Dynamic Weighing Mode
Set the status.

|       | OFF = disabled  | MANUAL = averaging and resetting are manually initiated by pressing FUNCTION.  
|-------|----------------|---------------------------------------------------------------|
|       |                | SEMI AUTO = averaging is automatically initiated when the display exceeds 5 graduations; resetting is manually initiated by pressing FUNCTION.  
|       |                | AUTO = averaging is automatically initiated when the display exceeds 5 graduations; resetting is automatically initiated when the display returns to within 5 graduations of zero.  

If MANUAL, SEMI AUTO, or AUTO is selected, the current averaging time is displayed.

Set the averaging time.

<table>
<thead>
<tr>
<th></th>
<th>OFF</th>
<th>60</th>
</tr>
</thead>
</table>

NOTE: Select 0 seconds to enable the Display Hold function. In this case, the first stable weight will be held on the display.

3.6.7 Check Weighing Mode
Set the status.

|       | OFF = disabled  | WEIGH = enabled for checking items by weight.  
|-------|----------------|-----------------------------------------------|
|       |                | PCS = enabled for checking items by count.  

3.6.8 End Mode
Advance to the next menu or return to the top of the current menu.
3.7 **Unit Menu**
Enter this menu to activate the desired units of measure.

**NOTE:** Due to national laws, the indicator may not include some of the units of measure listed.

### 3.7.1 Reset
Reset the Unit menu to the factory defaults. Factory default settings are shown in bold.

- **NO** = not reset
- **YES** = reset

**NOTE:** If LEGAL FOR TRADE is set to ON, the Unit menu is not reset.

### 3.7.2 Kilogram Unit
Set the status.

- **OFF** = disabled
- **ON** = enabled

### 3.7.3 Pound Unit
Set the status.

- **OFF** = disabled
- **ON** = enabled

### 3.7.4 Gram Unit
Set the status.

- **OFF** = disabled
- **ON** = enabled

### 3.7.5 Ounce Unit
Set the status.

- **OFF** = disabled
- **ON** = enabled

**NOTE:** Ounce Unit is not available when Range is set to DUAL.

### 3.7.6 Pound Ounce Unit
Set the status.

- **OFF** = disabled
- **ON** = enabled

**NOTE:** Pound Ounce Unit is not available when Range is set to DUAL or when Graduation setting is greater than 0.01 kilograms or 0.02 pounds.
3.7.7 Tonne Unit
Set the status.

<table>
<thead>
<tr>
<th>OFF</th>
<th>= disabled</th>
</tr>
</thead>
<tbody>
<tr>
<td>ON</td>
<td>= enabled</td>
</tr>
</tbody>
</table>

**NOTE:** Tonne Unit is not available when Range is set to DUAL or when Graduation setting is less than 0.01 kilograms or 0.02 pounds.

3.7.8 Custom Unit
Use Custom Unit to display weight in an alternative unit of measure. The custom unit is defined using a conversion factor, where the conversion factor is the number of custom units per kilogram expressed in scientific notation (Factor x 10^Exponent).
For example: To display weight in troy ounces (32.15075 troy ounces per kilogram) enter a Factor of 3.21508 and an Exponent of 1.

Set the status.

<table>
<thead>
<tr>
<th>OFF</th>
<th>= disabled</th>
</tr>
</thead>
<tbody>
<tr>
<td>ON</td>
<td>= enabled</td>
</tr>
</tbody>
</table>

**NOTE:** Custom Unit is not available when Range is set to DUAL.

When Custom Unit is set to ON, the Factor, Exponent and Least Significant Digit must be set.

**Factor**
Set the conversion factor using the numeric keypad.
Settings of 0.00001 to 9.99999 are available. The default setting is 1.00000.

**Exponent**
Set the factor multiplier.

<table>
<thead>
<tr>
<th>0</th>
<th>= multiply the Factor by 1 (1x10^0)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>= multiply the Factor by 10 (1x10^1)</td>
</tr>
<tr>
<td>2</td>
<td>= multiply the Factor by 100 (1x10^2)</td>
</tr>
<tr>
<td>3</td>
<td>= multiply the Factor by 1000 (1x10^3)</td>
</tr>
<tr>
<td>-2</td>
<td>= divide the Factor by 100 (1x10^-2)</td>
</tr>
<tr>
<td>-1</td>
<td>= divide the Factor by 10 (1x10^-1)</td>
</tr>
</tbody>
</table>

**Least Significant Digit**
Set the graduation.
Settings of 0.00001, 0.00002, 0.00005, 0.0001, 0.0002, 0.0005, 0.001, 0.002, 0.005, 0.01, 0.02, 0.05, 0.1, 0.2, 0.5, 1, 2, 5, 10, 20, 50, 100, 200, 500 and 1000 are available.

**NOTE:** Least Significant Digit setting selections are dependent on the Factor and Exponent settings. Selections are limited to values that will provide a scale resolution between 1:1000 and 1:50000.

3.7.9 End Unit
Advance to the next menu or return to the top of the current menu.
3.8 GMP Menu
Enter this menu to set the Good Manufacturing Practices data.

3.8.1 Reset
Reset the GMP menu to the factory defaults. Factory default settings are shown in bold.

| NO       | = not reset |
| YES      | = reset     |

3.8.2 Date
Enter this menu to set the date.

Date Type
Set the date format.

| MDY       | = Month.Day.Year |
| DMY       | = Day.Month.Year |
| YMD       | = Year.Month.Day |

Date Set
Set the date.

| 00 to 99  | = year position |
| 01 to 12  | = month position|
| 01 to 31  | = day position  |

3.8.3 Time
Enter this menu to set the time.

Time Type
Set the time format.

| 24 HOUR   | = 24 hour format |
| 12 HOUR   | = 12 hour format |

Time Set
Set the time.

24 hour format:
| 00 to 23  | = hour position |
| 00 to 59  | = minute position|

12 hour format:
| 01 to 12  | = hour position |
| 00 to 59  | = minute position|
| A or P    | = am or pm position |
3.8.4 User ID
Set the user identification.

Alphanumeric settings up to 12 characters are available. The default setting is 000000.

3.8.5 Project ID
Set the project identification.

Alphanumeric settings up to 12 characters are available. The default setting is 000000.

3.8.6 Scale ID
Set the scale identification.

Alphanumeric settings up to 12 characters are available. The default setting is 000000.

3.8.7 End GMP
Advance to the next menu or return to the top of the current menu.

3.9 Print1, Print2 Menus
Enter this menu to set printing parameters.

NOTE: The Print2 menu is only available if the optional RS232 or RS485/RS422 interface is installed.

3.9.1 Reset
Reset the Print menu to the factory defaults. Factory default settings are shown in bold.

NO = not reset
YES = reset

NOTE: If LEGAL FOR TRADE is set to ON, the Stable setting is not reset.

3.9.2 Print Stable Data Only
Set the printing criteria.

OFF = values are printed immediately, regardless of stability.
ON = values are printed only when the stability criteria are met.
3.9.3 Auto Print
Set the automatic printing functionality.

- **OFF** = disabled
- **ON STABLE** = printing occurs each time the stability criteria are met.
- **INTERVAL** = printing occurs at the defined time interval.
- **ACCEPT** = in Checkweigh mode, printing occurs each time the display is within the accept range and the stability criteria are met.
- **CONTINUOUS** = printing occurs continuously.

When **ON STABLE** is selected, set the conditions for printing.

- **LOAD** = Prints when the displayed load is stable.
- **LOAD ZERO** = Prints when the displayed load or zero reading is stable.

When **INTERVAL** is selected, set the time interval using the numeric keypad.

Settings of 1 to 3600 seconds are available.

3.9.4 Print Content Sub-menu
Enter this sub-menu to define the content of the printed data.

**Result**
Set the status.

- **OFF** = the displayed reading is not printed.
- **ON** = the displayed reading is printed.
- **NUMERIC ONLY** = only the numeric portion of the displayed reading is printed.

```
12.000 kg (ON)
12.000 (NUMERIC ONLY)
```

**Gross**
Set the status.

- **OFF** = the gross weight is not printed.
- **ON** = the gross weight is printed.

```
12.000 kg
```

**Net**
Set the status.

- **OFF** = the net weight is not printed.
- **ON** = the net weight is printed.

```
10.000 kg NET
```
Tare
Set the status.

OFF = the tare weight is not printed.
ON = the tare weight is printed.

Mode
Set the status.

OFF = the current mode is not printed.
ON = the current mode is printed.

Mode: X

Name
Set the status.

OFF = the name line is not printed.
ON = the name line is printed.

Name: _____________

Alibi Record ID
Set the status.

OFF = the Alibi Record ID line is not printed.
ON = the Alibi Record ID is printed.

Alibi Record: XXXXX

NOTE: The Alibi Record ID menu item is only displayed when the Alibi option is installed.

Library ID
Set the status.

OFF = the Library ID line is not printed.
ON = the Library ID is printed.

Library ID: XXXXX

NOTE: *Library Id: ------* is printed when Library Id is set ON, but a Library Record is not in use. This occurs under the following conditions:

- A Library Record is not loaded.
- The loaded Library Record is no longer in use, because a manually entered Tare, APW, Reference Weight, Under Limit, Over Limit or Level has replaced one of loaded values.
- The loaded Library Record is no longer in use, because the indicator was turned off.

Library Name
Set the status.

OFF = the Library Name line is not printed.
ON = the Library Name is printed.

Library Name: XXXXX

NOTE: *Library Id: ------* is printed when Library Id is set ON, but a Library Record is not in use. This occurs under the following conditions:

- A Library Record is not loaded.
- The loaded Library Record is no longer in use, because a manually entered Tare, APW, Reference Weight, Under Limit, Over Limit or Level has replaced one of loaded values.
- The loaded Library Record is no longer in use, because the indicator was turned off.
3.9.5 Layout Sub-menu
This sub-menu is used to define the format of the data output to a printer or computer.

Format
Set the printing format.

MULTI = a multiple line printout is generated. A CRLF is added after each data output.
SINGLE = a single line printout is generated. A TAB delimiter is added between each data output.

Feed
Set the paper feed.

NONE = the paper remains in its current position after printing.
LINE = move the paper up one line after printing.
4 LINE = move the paper up four lines after printing.
FORM = a form feed is appended to the output.

3.9.6 List
Print the specified data.

MENU = print all menu settings.
ALIBI = print a range of alibi records stored in memory.
LIBRARY = print all library records stored in memory.

NOTE: The ALIBI selection is only available when the ALIBI Memory Option is installed.

When ALIBI is selected, set the range of Alibi records to be printed.

START = Enter the first record in the range. Settings from 1 to the last stored record number are available.
END. = Enter the last record in the range. Settings from the Start value to the last stored record number are available.

NOTE: To print all Alibi records, do not change the Start and End values. To print a single record, enter the same record number for the Start and End values.

3.9.7 End Print1, End Print2
Advance to the next menu or return to the top of the current menu.
3.10 COM1, COM2 Menus
Enter this menu to define communication parameters.

NOTE: The COM2 menu is only available if an optional RS232 PC Board or RS485/RS422 PC Board is installed.

3.10.1 Reset
Reset the COM menus to the factory defaults. Factory default settings are shown in bold.

NO      = not reset
YES     = reset

3.10.2 Baud
Set the baud rate.

300      = 300 bps
600      = 600 bps
1200     = 1200 bps
2400     = 2400 bps
4800     = 4800 bps
9600     = 9600 bps
19200    = 19200 bps

3.10.3 Parity
Set the data bits and parity.

7 EVEN   = 7 data bits, even parity
7 ODD    = 7 data bits, odd parity
7 NONE   = 7 data bits, no parity
8 NONE   = 8 data bits, no parity

3.10.4 Stop Bit
Set the number of stop bits.

1        = 1 stop bit
2        = 2 stop bits

3.10.5 Handshake
Set the flow control method.

NONE     = no handshaking
XON-XOFF = XON/XOFF handshaking
HARDWARE = hardware handshaking (COM1 menu only)
3.10.6 Address
Set the communication address (COM2 menu only).

OFF = no address  
01 to 99 = address 01 to 99

NOTE: The Address menu item is only displayed in the COM2 menu if the optional RS485/RS422 PC Board is installed.

3.10.7 Alternate Command Sub-menu
Enter this sub-menu to set a different command character for the P (Print), T (Tare) or Z (Zero) commands.

NOTE: The selected character can only be used for one command.

Alternate Print Command
Set the alternate command character for Print.

Settings of A to Z are available. The default setting is P.

Alternate Tare Command
Set the alternate command character for Tare.

Settings of A to Z are available. The default setting is T.

Alternate Zero Command
Set the alternate command character for Zero.

Settings of A to Z are available. The default setting is Z.

3.10.8 End COM1, End COM2
Advance to the next menu or return to the top of the current menu.

3.11 I-O Menu
Enter this menu to set the optional input and output device parameters.

3.11.1 Reset
Reset the I-O menu to the factory defaults.

NO = not reset  
YES = reset
3.11.2 External Input
Set the function to be controlled by an optional external input device, such as a footswitch.

- **OFF** = disabled
- **TARE** = equivalent to pressing the TARE button.
- **ZERO** = equivalent to pressing the ZERO button.
- **PRINT** = equivalent to pressing the PRINT button.
- **FUNCTION** = equivalent to pressing the FUNCTION button.
- **S-S** = when the optional relay pc board is installed, the first external input changes the state of the relay; the second external input returns the relay to the original state (START-STOP).
- **T-S-S** = when the optional relay pc board is installed, the first external input changes the state of the relay; the second external input returns the relay to the original state (TARE-START-STOP).

3.11.3 Input Beep
Set the beeper response to an external input.

- **OFF** = the beeper does not sound.
- **ON** = the beeper sounds.

3.11.4 Relay Output Sub-menu
Set the relay output parameters.

**NOTE:** The Relay Output sub-menu and associated menu items are not displayed unless the optional Relay PC Board is installed.

- **Type**
  - **OPEN** = the relay output is normally open.
  - **CLOSED** = the relay output is normally closed.

**CAUTION:** The normally closed relay condition is only active while the indicator is powered on. When powered off or when power is removed, the relay condition returns to a normally open condition. Restoring power to the indicator will restore the closed condition of the relays.

- **Output Sequence**
  - **NORMAL** = the previously enabled relay will be disabled as the next relay is enabled.
  - **HOLD** = the previously enabled relay will hold the same state as the next relay is enabled.
Contact
Set the timing of the relay contacts.

SIMULTANEOUS = the relays open or close at the same time.
B-B-M = the relay opens before the next relay closes (break-before-make).
M-B-B = the relay closes before the next relay opens (make-before-break).

NOTE: Break-before-make has a 100 ms delay. Make-before-break has a 100 ms overlap.

Stable
Set the stability condition for the relay to change state.

OFF = relay changes are immediate.
ON = relay changes are delayed until the reading becomes stable.

3.11.5 End I-O
Advance to the next menu or return to the top of the current menu.

3.12 Menu Lock Menu
Use this menu to prevent unauthorized changes to menu settings. When the security switch is set to ON, the locked menus can be viewed but not changed.

3.12.1 Reset
Reset the Menu Lock menu to the factory defaults. Factory default settings are shown in bold.

NO = not reset
YES = reset

NOTE: Settings for Legal for Trade controlled menu items are not reset.

3.12.2 Lock Calibration
Set the status.

OFF = the Calibration menu is not locked.
ON = the Calibration menu is locked.

3.12.3 Lock Setup
Set the status.

OFF = the Setup menu is not locked.
ON = the Setup menu is locked.
3.12.4 Lock Readout
Set the status.

\[ \begin{array}{ll}
\text{OFF} & = \text{the Readout menu is not locked.} \\
\text{ON} & = \text{the Readout menu is locked.}
\end{array} \]

3.12.5 Lock Mode
Set the status.

\[ \begin{array}{ll}
\text{OFF} & = \text{the Mode menu is not locked.} \\
\text{ON} & = \text{the Mode menu is locked.}
\end{array} \]

3.12.6 Lock Unit
Set the status.

\[ \begin{array}{ll}
\text{OFF} & = \text{the Unit menu is not locked.} \\
\text{ON} & = \text{the Unit menu is locked.}
\end{array} \]

3.12.7 Lock Print1
Set the status.

\[ \begin{array}{ll}
\text{OFF} & = \text{the Print1 menu is not locked.} \\
\text{ON} & = \text{the Print1 menu is locked.}
\end{array} \]

3.12.8 Lock Print2
Set the status.

\[ \begin{array}{ll}
\text{OFF} & = \text{the Print2 menu is not locked.} \\
\text{ON} & = \text{the Print2 menu is locked.}
\end{array} \]

3.12.9 Lock COM1
Set the status.

\[ \begin{array}{ll}
\text{OFF} & = \text{the COM1 menu is not locked.} \\
\text{ON} & = \text{the COM1 menu is locked.}
\end{array} \]

3.12.10 Lock COM2
Set the status.

\[ \begin{array}{ll}
\text{OFF} & = \text{the COM2 menu is not locked.} \\
\text{ON} & = \text{the COM2 menu is locked.}
\end{array} \]
3.12.11 Lock GMP
Set the status.

OFF = the GMP menu is not locked.
ON = the GMP menu is locked.

3.12.12 Lock I-O
Set the status.

OFF = the I-O menu is not locked.
ON = the I-O menu is locked.

3.12.13 End Menu Lock
Advance to the next menu or return to the top of the current menu.

3.13 Key Lock Menu
Use this menu to prevent unauthorized access to button functions.
When the security switch is set to ON, the locked buttons are disabled.

3.13.1 Reset
Reset the Key Lock menu to the factory defaults. Factory default settings are shown in bold.

NO = not reset
YES = reset

3.13.2 Lock All Buttons
Set the status.

OFF = all buttons are not locked.
ON = all buttons are locked.

3.13.3 Lock Off Button
Set the status.

OFF = the Off button is not locked.
ON = the Off button is locked.

3.13.4 Lock Zero Button
Set the status.

OFF = the Zero button is not locked.
ON = the Zero button is locked.
3.13.5  Lock Print Button
Set the status.

**OFF** = the PRINT button is not locked.
**ON** = the PRINT button is locked.

3.13.6  Lock Unit Button
Set the status.

**OFF** = the Unit button is not locked.
**ON** = the Unit button is locked.

3.13.7  Lock Function Button
Set the status.

**OFF** = the FUNCTION button is not locked.
**ON** = the FUNCTION button is locked.

3.13.8  Lock Mode Button
Set the status.

**OFF** = the Mode button is not locked.
**ON** = the Mode button is locked.

3.13.9  Lock Tare Button
Set the status.

**OFF** = the TARE button is not locked.
**ON** = the TARE button is locked.

3.13.10 Lock Menu Button
Set the status.

**OFF** = the Menu button is not locked.
**ON** = the Menu button is locked.
3.13.11 Lock Library Button
Set the status.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>OFF</td>
<td>= the LIBRARY button is not locked.</td>

<tr>
<td>ON</td>
<td>= the Edit button is locked.</td>
</tr>
</tbody>
</table>

3.13.13 End Lock
Advance to the next menu or return to the top of the current menu.

3.14 End Menu
Advance to the Calibration Menu or exit the menu and return to the current application mode.

3.15 Securing the Menu and Key Lock menu settings
A slide switch located on the Main PC Board inside the housing is used to secure the Menu Lock and Key Lock menu settings. When the switch is set to the ON position, the Menu Lock and Key Lock menu settings may be viewed but not changed.

Open the housing as explained in Section 2.3.1. Set the position of the switch to ON as shown in Section 1.2, Figure 1-3, Item 11.

When the switch is in the ON position, the start up display includes the LOCK ON message.

Note: This switch is also used in conjunction with the Legal for Trade menu item. When the Legal for Trade menu is set to ON, the switch must be set to the ON position to prevent calibration and changes to metrologically significant settings. Refer to Section 6 for more information.
4. OPERATION

4.1 Turning Indicator On/Off
To turn the indicator on, press ON/ZERO Off. The indicator performs a display test followed by a series of informational displays, and then enters the last active mode.

To turn the indicator off, press and hold ON/ZERO Off until -OFF- appears.

If powered by AC mains, the indicator enters standby and displays the clock.

If powered by batteries, the indicator turns off completely.

4.2 Zero Operation
Press ON/ZERO Off to zero the display.

NOTE: The display must be stable and within the Zero Range.

4.3 Manual Tare
Place the container on the scale and press TARE.

NOTE: The display must be stable.

To clear the tare, remove all weight from the scale and press TARE.

4.4 Preset Tare
Enter the preset tare value using the numeric keypad, then press TARE. The display will show the PT symbol and the tare value as a negative number.

To clear the preset tare, remove all weight from the scale and press TARE.

NOTE: The preset tare value may also be entered or cleared using the xT command. (See Section 5.1.)

4.5 Auto Tare
When Auto Tare is set ON in the Setup menu, the initial item placed on the scale is automatically tared.

The tare value is automatically cleared when the weight on the scale is fully removed.

4.6 Changing Units of Measure
Press and hold Units until the desired unit of measure is displayed, then release the button.

NOTE: Only units of measure enabled in the Unit menu will be displayed. (See Section 3.7.)
4.7 Printing Data
Press the PRINT button to send data to a printer or computer.

NOTE: To ensure that the desired data is output correctly, first set the printing parameters (Section 3.9) and the Communication parameters (Section 3.10).

NOTE: Data may also be printed using the P command. (See Section 5.1.)

4.8 Dual Scale Operation
If a second scale base is attached to the indicator, press and hold the 1s2 button to alternate the display between the readings for scale 1 and scale 2. The scale symbol on the display identifies which scale is active. 1s indicates that scale 1 is active, s2 indicates that scale 2 is active.

NOTE: DUAL SCALE must be set to ON in the SETUP menu and the second scale must be set up and calibrated.

4.9 Application Modes
Press and hold Mode until the desired application mode is displayed, then release the button.

NOTE: Only modes enabled in the Mode menu will be displayed. (See Section 3.6.)

4.9.1 Weighing
Use this mode to weigh items in the desired unit of measure.

Place the item to be weighed on the scale and read the value on the display.

NOTES: Press FUNCTION to display the weight briefly in 10x expanded resolution if Accumulate is set to OFF in the Setup menu.
Press FUNCTION to add the displayed count to the accumulation data if Accumulate is set to MANUAL in the Setup menu.
If Accumulate is set to AUTO in the Setup menu, the displayed weight is automatically added to the accumulation data when the reading becomes stable.

4.9.2 Parts Counting
Use this mode to count parts of uniform weight. The indicator supports positive counting and negative counting. Positive counting refers to counting parts as they are added to the empty scale. Negative counting refers to counting parts that have already been added to the scale.

NOTES: If Accumulate is set to OFF in the Setup menu, the second line displays the weight in current unit by default. Pressing FUNC can switch the second line display between weight and APW.
If Accumulate is set to MANUAL in the Setup menu, press FUNCTION to add the displayed count to the accumulation data.
If Accumulate is set to AUTO in the Setup menu, the displayed count is automatically added to the accumulation data when the reading becomes stable.

Defining the Average Piece Weight for Positive Counting
To define the average piece weight (APW), place a specified quantity on the scale.

When the Mode button is released, CLEAR APW? appears.
Press No to use the stored APW or press Yes to establish a new APW.

When establishing a new APW, the display alternates between PLACE 10 OR and ENTER APW.

NOTE: To change the specified number of pieces, press No repeatedly. The display will step through the alternative sample sizes: PLACE 5, PLACE 10, PLACE 20, PLACE 50 and PLACE 100.
To define the APW using parts, place the specified quantity of parts on the scale and press the FUNCTION button.

To define the APW using a numeric value, enter the value using the keypad, then press the FUNCTION button.

**Positive Counting**
After defining the APW, place the items to be counted on the scale and read the value on the display. The number of pieces appears on the top line and the actual weight appears on the bottom line.

**Defining the Average Piece Weight for Negative Counting**
Define average piece weight (APW) by removing a specified quantity from a full container on the scale. When Mode is released, CLEAR APW? is displayed. Press No to use the stored APW or press the Yes button to define a new APW.

When establishing a new APW, the display alternates between PLACE 10 OR and ENTER APW.

To enable negative counting, press and hold the +/- button until the display shows PLACE TOTAL.

To establish the APW, place the entire quantity of parts on the scale and press FUNCTION.

Then remove the specified quantity of parts from the scale and press FUNCTION.

**NOTE:** To change the specified number of pieces, press No repeatedly. The display will step through the alternative sample sizes: PLACE 5, PLACE 10, PLACE 20, PLACE 50 and PLACE 100.

**NOTE:** At this stage, it is still possible to define the APW by entering the value using the keypad and pressing the FUNCTION button.

**NOTE:** The Total PCS will be cleared when the APW is re-established.

**Negative Counting**
After defining the APW, read the value on the display. The number of pieces appears on the top line and the actual weight appears on the bottom line.
### 4.9.3 Percent Weighing

Use this mode to compare the weight of items as a percentage of a Reference Weight.

#### Defining the Reference Weight

When the Mode button is released, CLEAR REF? is displayed. Press No to use the stored Reference Weight or press Yes to establish a new Reference Weight.

When establishing a new Reference Weight, the display alternates between PLACE REF OR and ENTER REF.

To establish the Reference Weight using an item, place the item on the scale and press FUNCTION.

To establish the Reference Weight using a numeric value, enter the value using the keypad, then press FUNCTION.

**Percent Weighing**

After defining the reference weight, place an item on the scale and read the value on the display. The percent value is displayed on the top line and the actual weight is displayed on the bottom line.

**NOTE:** Press FUNCTION to briefly display the Reference Weight.

### 4.9.4 Dynamic Weighing

Use this mode to weigh moving items or large items that block the display.

**NOTE:** If Accumulate is set to AUTO in the Setup menu, the held weight is automatically added to the accumulation data.

**Manual operation** (DYNAMIC is set to MANUAL in the MODE menu)

When the display shows READY, place the item on the scale.

Press FUNCTION to average the readings for the time period defined in the LEVEL setting (Section 3.6.6).

When averaging is completed, the dynamic icon flashes. The averaged weight and HOLD are displayed until FUNCTION is pressed again.

**Semi-automatic operation** (DYNAMIC is set to SEMI in the MODE menu)

When the display shows READY, place the item on the scale. The readings are automatically averaged for the time period defined in the LEVEL setting. The averaged weight and HOLD are displayed until the item is removed and FUNCTION is pressed.

**Automatic operation** (DYNAMIC is set to AUTOMATIC in the MODE menu)

When the display shows READY, place the item on the scale. The readings are automatically averaged for the time period defined in the LEVEL setting. The averaged weight and HOLD are displayed until the item has been removed from the scale for 10 seconds.
4.9.5 Check Weighing

Use this mode to compare the weight or quantity of items to a target weight range. The indicator supports positive, negative and zero check weighing.

**NOTES:**
- If Accumulate is set to OFF in the Setup menu, press FUNCTION to display the limits.
- If Accumulate is set to MANUAL in the Setup menu, press FUNCTION to add the displayed weight to the accumulation data.
- If Accumulate is set to AUTO, the stable weight is automatically added to the accumulation data.

**Defining the Under and Over Limits**

When the Mode button is released, EDIT LIMITS? appears. Press No to use the stored UNDER and OVER limits or press Yes to define new limits.

When defining the limits, the display shows UNDER and the current setting. To keep the current limit, press Yes.

To change the UNDER limit, enter the new limit using the keypad. To change the sign of the limit, press and hold +/- (CLR/+/-). Then press FUNCTION.

The display shows OVER and the current setting. To keep the current limit, press Yes.

To change the over limit, enter the new limit using the keypad. To change the sign of the limit, press and hold +/- . Then press FUNCTION.

**Positive Check Weighing**

Positive check weighing is used to determine when the material added to the scale is within the target range. In this case, the under and over limits must be positive values. (The OVER limit must be greater than the UNDER limit.)

Add material to the scale until it is within the ACCEPT range.

If the item is lighter than the UNDER limit, the yellow UNDER LED will light. If the item is within the target weight range, the green ACCEPT LED will light. If the item is heavier than the OVER limit, the red OVER LED will light.

**Negative Check Weighing**

Negative check weighing is used to determine when the material removed from the scale is within the target range. In this case, the UNDER and OVER limits are both negative values. (The UNDER limit must be greater than the OVER limit.)

Place the item to be weighed on the scale and press TARE. Remove a portion of the item until it is within the ACCEPT range.

If the item is heavier than the UNDER limit, the yellow UNDER LED will light. If the item is within the target weight range, the green ACCEPT LED will light. If the item is lighter than the OVER limit, the red OVER LED will light.
Zero Check Weighing

Zero check weighing is used when comparing subsequent samples to an initial reference sample. In this case, the UNDER limit must be a negative value and the OVER limit must be a positive value.

Place the reference item on the scale and press TARE. Remove the reference sample and place the item to be compared on the scale to determine if it is within the ACCEPT range.

If the item is lighter than the UNDER limit, the yellow UNDER LED will light. If the item is within the target weight range, the green ACCEPT LED will light. If the item is heavier than the OVER limit, the red OVER LED will light.

4.9.6 PCS (Pieces Counting) Check Weighing

Set Checkweigh to PCS in the Mode Menu. Use this mode to compare the quantity of items to a target quantity range. The indicator supports positive, negative and zero check counting.

NOTES: If Accumulate is set to OFF in the Setup menu, press the FUNCTION button to briefly display the UNDER and OVER limits and the APW value.

If Accumulate is set to MANUAL in the Setup menu, press the FUNCTION button to add the displayed quantity to the accumulation data.

If Accumulate is set to AUTO, the stable quantity is automatically added to the accumulation data.

Defining the Average Piece Weight (APW) and the Under and Over Limits

If CHECK was set to PCS in the MODE menu:

When the Mode key is released, the display shows: CHECK on the first line, CLEAR APW? on the second line, and the Pcs icon appears on the right.

Press No to use the previously defined APW and go to the step for setting UNDER and OVER Limits.

Press Yes to define a new APW.

NOTE: Check Counting mode shares the same APW with Counting mode.

When establishing a new APW, the display alternates between PLACE 10 OR and ENTER APW.

NOTE: To change the specified number of pieces, press No repeatedly. The display will step through the alternative sample sizes: PLACE 5, PLACE 10, PLACE 20, PLACE 50 and PLACE 100.

To define the APW using samples, place the samples on the scale, then press FUNCTION.

To define the APW using a numeric value, enter the value using the keypad, then press FUNCTION.

NOTE: The APW is taken in the current weighing unit.

NOTE: The Total PCS will be cleared when the APW is re-established.

After the APW is defined, a screen prompt asks: EDIT LIMITS?

(If Kg appears to the right of CHECK instead of Pcs, change the Checkweigh setting in the MODE menu.)

Press No to use the previously defined UNDER and OVER Limits.

Press Yes to set new limits.

When defining the limits, the display shows UNDER and the current setting.

To keep the current UNDER limit, press Yes, or

To change the UNDER limit, use the keypad to enter the desired number and press Yes.

(To change the sign of the limit, press and hold +/- before pressing Yes.)

The display next shows OVER and the current setting.

To keep the current OVER limit, press Yes, or

To change the OVER limit, use the keypad to enter the new limit, and press Yes.

(To change the sign of the limit, press and hold +/- before pressing Yes.)

The indicator is now ready for Check Counting. It will show:

- ACCEPT if the defined number of pieces are placed on the scale, or
- OVER if the number of pieces exceeds the limit, or
- UNDER when the number of pieces is less than the limit.
Positive Check Counting
Use Positive Check Counting to determine when the quantity added to the scale is within the target range. In this case, the UNDER and OVER limits must be positive values. The OVER limit must be greater than the UNDER limit.

Add items to the scale until the quantity is within the accept range.

If the quantity is lower than the UNDER limit, the yellow UNDER LED will light. If the quantity is within the target quantity range, the green ACCEPT LED will light. If the quantity is higher than the OVER limit, the red OVER LED will light.

Negative Check Counting
Negative Check Counting is used to determine when the quantity removed from the scale is within the target range. In this case, the under and over limits are both negative values. The under limit must be greater than the over limit.

Place the items to be counted on the scale and press TARE. Remove items until the quantity is within the ACCEPT range.

If the quantity is higher (less negative) than the UNDER limit, the yellow UNDER LED will light. If the quantity is within the target quantity range, the green ACCEPT LED will light. If the quantity is lower (more negative) than the OVER limit, the red OVER LED will light.

Zero Check Counting
Zero check counting is used when comparing subsequent samples to an initial reference sample. In this case, the UNDER limit must be a negative value and the OVER limit must be a positive value.

Place the reference quantity on the scale and press TARE. Remove the reference quantity and place the quantity to be compared on the scale to determine if it is within the ACCEPT range.

If the quantity is lower than the UNDER limit, the yellow UNDER LED will light. If the quantity is within the target quantity range, the green ACCEPT LED will light. If the quantity is higher than the OVER limit, the red OVER LED will light.
4.10 Library
When an item is processed on a regular basis, the item’s data may be stored in memory for future use.

The following data is stored for each mode.

<table>
<thead>
<tr>

**NOTES:** LIBRARY must be set to ON in the SETUP menu (Section 3.4.18).
Up to 256 library records may be stored.

4.10.1 Storing Library Data
Select the desired Mode using the Mode button. Press LIBRARY to view the next available memory location for the active mode.

The display shows the Record ID with a mode prefix and a unique identification number.

- Wxxx = Weighing records
- PCxxx = Parts Counting records
- Pxxx = Percent Weighing records
- Cxxx = Check Weighing records
- CCxxx = Check Counting records
- Dxxx = Dynamic Weighing records

Press No to advance to the next Record ID or press Yes to begin entering the library data for the displayed Record ID.

The data type appears on the first line. The data value appears on the second line. Use the keypad to change the data value. Press Yes to accept the data value and move to the next data type.

**Weighing Mode Library Records**
The Name of the item is displayed. By default, the Name is the same as the Record ID.
Use the keypad to change the value. Press Yes to accept the value.

**NOTE:** The Name length can be a maximum of 7 characters.

The Preset Tare of the item is displayed. By default, the current Tare is used as the Preset Tare value.
Use the keypad to change the value. Press Yes to accept the value.

To save the record, press Yes.
**Counting Mode Library Records**
The Name of the item is displayed. By default, the Name is the same as the Record ID. Use the keypad to change the value. Press **Yes** to accept the value.

**NOTE:** The Name length can be a maximum of 7 characters.

The Preset Tare of the item is displayed. By default, the current Tare is used as the Preset Tare value. Use the keypad to change the value. Press **Yes** to accept the value.

The APW of the item is displayed. By default, the current APW is used as the APW value. Use the keypad to change the value. Press **Yes** to accept the value.

To save the record, press **Yes**.

**Percent Weighing Mode Library Records**
The Name of the item is displayed. By default, the Name is the same as the Record ID. Use the keypad to change the value. Press **Yes** to accept the value.

**NOTE:** The Name length can be a maximum of 7 characters.

The Preset Tare of the item is displayed. By default, the current Tare is used as the Preset Tare value. Use the keypad to change the value. Press **Yes** to accept the value.

The Reference Weight of the item is displayed. By default, the current Reference Weight is used as the Reference Weight value. Use the keypad to change the value. Press **Yes** to accept the value.

To save the record, press **Yes**.

**Check Weighing Mode Library Records**
The Name of the item is displayed. By default, the Name is the same as the Record ID. Use the keypad to change the value. Press **Yes** to accept the value.

**NOTE:** The Name length can be a maximum of 7 characters.

The Preset Tare of the item is displayed. By default, the current Tare is used as the Preset Tare value. Use the keypad to change the value. Press **Yes** to accept the value.
The Under Limit of the item is displayed. By default, the current UNDER Limit is used as the UNDER Limit value. Use the keypad to change the value. Press Yes to accept the value.

![UNDER Limit](image)

The OVER Limit of the item is displayed. By default, the current OVER Limit is used as the OVER Limit value. Use the keypad to change the value. Press Yes to accept the value.

![OVER Limit](image)

To save the record, press Yes.

**Check Counting Mode Library Records**

The Name of the item is displayed. By default, the Name is the same as the Record ID. Use the keypad to change the value. Press Yes to accept the value.

**NOTE:** The Name length can be a maximum of 7 characters.

![Name](image)

The Preset Tare of the item is displayed. By default, the current Tare is used as the Preset Tare value. Use the keypad to change the value. Press Yes to accept the value.

![Preset Tare](image)

The APW of the item is displayed. By default, the current APW is used as the APW value. Use the keypad to change the value. Press Yes to accept the value.

![APW](image)

The UNDER Limit of the item is displayed. By default, the current UNDER Limit is used as the UNDER Limit value. Use the keypad to change the value. Press Yes to accept the value.

![UNDER Limit](image)

The OVER Limit of the item is displayed. By default, the current Over Limit is used as the OVER Limit value. Use the keypad to change the value. Press Yes to accept the value.

![OVER Limit](image)

To save the record, press Yes.

![SAVE RECORD](image)
Dynamic Weighing Mode Library Records
The Name of the item is displayed. By default, the Name is the same as the Record ID. Use the keypad to change the value. Press Yes to accept the value.

NOTE: The Name length can be a maximum of 7 characters.

The Preset Tare of the item is displayed. By default, the current Tare is used as the Preset Tare value. Use the keypad to change the value. Press Yes to accept the value.

The Level (averaging time) of the item is displayed. By default, the current Level is used as the Level value. Use the keypad to change the value. Press Yes to accept the value.

To save the record, press Yes.

4.10.2 Retrieving Data
Press Mode to select the desired Mode. Enter the Record ID number (without prefix) and press LIBRARY to view the desired memory location. To view a different Record ID, press No.

Press Yes to load the data for the displayed Record ID.

4.10.3 Editing Stored Data
Press Mode to select the desired Mode. Enter the Record ID number (without prefix) and press LIBRARY to view the desired memory location.

The Record ID is displayed on the first line and the Name of the item is displayed on the second line. Press and hold Edit to begin editing the library data.

If desired, edit the displayed data value using the keypad. Then press Yes to view the next data type.

After all data types have been viewed, press Yes to save the changes.
4.10.4 Deleting Stored Data
Select the desired Mode using the Mode button. Enter the Record ID number (without prefix) and press LIBRARY to view the desired memory location. To view a different Record ID, press No.

Press the CLR button, then Yes to delete the data for the current library record. The display returns to the current mode.

Note: If you do not want to delete the library record, press No. The display returns to the current library record. Press Exit to return to the current mode.

4.11 Accumulation and Statistics
The Accumulation feature enables manual or automatic totalizing of displayed values. Statistical data is stored in memory for review and printing.

Notes: Set ACCUMULATE to MANUAL or AUTO in the SETUP menu. The Accumulation function is available in Weighing, Counting, Dynamic and Check Weighing modes. Accumulation data is stored separately for each mode. To include statistics data when printing, set INFORMATION to ON in the PRINT CONTENT menu.

4.11.1 Accumulating Displayed Values
With ACCUMULATE set to MANUAL, place the item on the scale and press FUNCTION to accumulate the displayed value.
With ACCUMULATE set to AUTO, place the item on the scale. The displayed value is accumulated automatically.
The accumulated value is displayed on the second line.

Note: The item must be removed from the scale before the next item can be accumulated.

4.11.2 Viewing Statistics Data
To view the statistics data, press INFO (0 on the keypad). The following statistics data will be displayed momentarily: number of weighings, total, average, standard deviation, minimum, maximum, and difference.

4.11.3 Clearing Statistics Data
To clear the accumulation value and statistics data, press the CLR button while the statistics information is being displayed. When the display shows CLEAR STATS?, press the Yes button to clear the statistics data or press the No button to keep the statistics data.
4.12 Alibi Memory
When the optional Alibi Memory pc board is installed, weighing results may be stored in memory for future reference by pressing PRINT or sending the "P" command. Up to 262,112 alibi records may be stored.

The following data is stored for each mode.

- Record ID
- Weight value
- Tare value
- Date
- Time
- Scale number

NOTES: ALIBI must be set to ON in the SETUP menu.
When the Alibi Memory is full, the Record ID counter begins over at to 000001.
The new data overwrites the previously stored data for that record.

4.12.1 Viewing Alibi Data
To view alibi records, press and hold the Info button until ALIBI is displayed. When the button is released, the display shows the first alibi Record ID. Press Yes to view that record, or press No or Back to move to the desired Record ID.

Alternatively, enter the Record ID number using the keypad and press Function.
Press Yes to view the record.

The stored data is displayed with the value on the first line and the Record ID and data type on the second line. To view the remaining data types, repeatedly press No.

To return to the active mode, press Exit.
4.12.2 Printing Alibi Data
To print alibi records, enter the menu and navigate to the Print>List>Alibi menu (see Section 3.9.6), then press Yes.

The display shows the first stored record number. Press Yes to accept the displayed value as the starting record number in the range to be printed.

If a different starting record number is desired:
- Press No to increase the Alibi record number.
- Or press Back to jump to the last Alibi record number stored, then decrease the Alibi record number.
- Or enter the Alibi record number using the keypad.
- Then press Yes to accept the displayed value as the starting record number in the range to be printed.

The display shows the last stored record number. Press Yes to accept the displayed value as the ending record number in the range to be printed.

If a different ending record number is desired:
- Press No to jump to the starting Alibi record number that was just defined.
- Or press Back to decrease the Alibi record number.
- Or enter the Alibi record number using the keypad.
- Then press Yes to accept the displayed value as the ending record number in the range to be printed.

Alibi records are printed in the format shown in Section 5.3.

NOTE: To print all Alibi records, do not change the Start and End values.
To print a single record, enter the same record number for the Start and End values.
5. SERIAL COMMUNICATION

5.1 Interface Commands
The indicator can be controlled using the commands listed below.

<table>
<thead>
<tr>
<th>Command</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>ON</td>
<td>Turns the indicator on.</td>
</tr>
<tr>
<td>OFF</td>
<td>Turns the indicator off.</td>
</tr>
<tr>
<td>IP</td>
<td>Immediate print of displayed weight (stable or unstable).</td>
</tr>
<tr>
<td>P</td>
<td>Print displayed weight (stable or unstable).</td>
</tr>
<tr>
<td>SP</td>
<td>Print on stability.</td>
</tr>
<tr>
<td>CP</td>
<td>Continuous print.</td>
</tr>
<tr>
<td>xP</td>
<td>Print on interval, where x = 1 to 3600 (seconds).</td>
</tr>
<tr>
<td>Z</td>
<td>Equivalent to pressing the ZERO button.</td>
</tr>
<tr>
<td>T</td>
<td>Equivalent to pressing the TARE button.</td>
</tr>
<tr>
<td>xT</td>
<td>Establish a preset tare, where x = the tare value in the current weighing unit.</td>
</tr>
<tr>
<td>PU</td>
<td>Print the current weighing unit.</td>
</tr>
<tr>
<td>xU</td>
<td>Change the weighing unit, where x = 1 (g), 2 (kg), 3 (lb), 4 (oz), 5 (lb:oz), 6 (t), 7 ©.</td>
</tr>
<tr>
<td>PV</td>
<td>Print the name, software version and LFT ON (if LFT is set to ON).</td>
</tr>
<tr>
<td>H x &quot;text&quot;</td>
<td>Enter the header line, where x = 1 to 5 (line number) and &quot;text&quot; = header text up to 24 characters.</td>
</tr>
<tr>
<td>Escape key and R</td>
<td>Global reset (all menu settings are reset to their factory default settings).</td>
</tr>
</tbody>
</table>

NOTES:
1) Commands sent to the indicator must be terminated by a carriage return (CR) or a carriage return-line feed (CRLF).
2) Alternate command characters may be defined by the user. Refer to Section 3.10.7.
3) Data output by the indicator is always terminated with a carriage return-line feed (CRLF).

5.2 Output Format
The Result Data is output in the following format.

<table>
<thead>
<tr>
<th>Field:</th>
<th>Label</th>
<th>Space</th>
<th>Weight</th>
<th>Space</th>
<th>Unit</th>
<th>Space</th>
<th>Stability</th>
<th>Space</th>
<th>G/N</th>
<th>Space</th>
<th>Term. Characters</th>
</tr>
</thead>
<tbody>
<tr>
<td>Length:</td>
<td>≤11</td>
<td>≤1</td>
<td>9</td>
<td>≤5</td>
<td>1</td>
<td>≤1</td>
<td>≤1</td>
<td>≤3</td>
<td>≤1</td>
<td>≤4</td>
<td></td>
</tr>
</tbody>
</table>

1) In certain cases, a Label field of up to 11 characters is included. Refer to Section 5.3.
2) Each field is followed by a single delimiting space (ASCII 32).
3) The Weight field is 9 right justified characters. If the value is negative, the "-" character is located at the immediate left of the most significant digit.
4) The Unit field contains the unit of measure abbreviation up to 5 characters.
5) The Stability field contains the "?" character if the weight reading is not stable. The Stability field and the following Space field are omitted if the weight reading is stable.
6) The G/N field contains the net or gross indication. For net weights, the field contains "NET". For gross weights, the field contains nothing, "G" or "B", depending on the GROSS INDICATOR menu setting. Refer to Section 3.5.8.
7) The Termination Characters field contains CRLF, Four CRLF or Form Feed (ASCII 12), depending on the LINE FEED menu setting. (See Section 3.9.5.)
5.3 Printout Examples

Examples for modes are shown with all CONTENT settings ON and values defined for the header lines.

</table>
6. **LEGAL FOR TRADE**
When the indicator is used in trade or a legally controlled application it must be set up, verified and sealed in accordance with local weights and measures regulations. It is the responsibility of the purchaser to ensure that all pertinent legal requirements are met.

6.1 **Settings**
Before verification and sealing, perform the following steps:
1. Verify that the menu settings meet the local weights and measures regulations.
2. Perform a calibration as explained in Section 3.3.
3. Set Legal for Trade to ON in the Setup menu.
4. Exit the menu.
5. Disconnect power from the indicator and open the housing as explained in Section 2.3.1.
6. Set the position of the security switch SW1 to ON as shown in Section 1.2, Figure 1-3, Item 11.
7. Close the housing.
8. Reconnect power and turn the indicator on.
9. During power up, the display will show "LFT MODE ON", confirming that the indicator is ready to be sealed.

**NOTE:** When Legal for Trade is set to ON and the security switch is set to ON, the following menu settings cannot be changed: Zero Calibration, Span Calibration, Linearity Calibration, GEO, Range, Capacity, Graduation, Power On Unit, Zero Range, Auto Tare, Retain Weight, Legal for Trade, Stable Range, Auto Zero Tracking, Gross Indicator, Modes, Units, Stable Only.

**NOTE:** For installations that employ the audit trail sealing method, steps 5 to 8 are not required. However, the security switch may be set to ON to safeguard against unintentional changes to configuration and calibration settings.

6.2 **Verification**
The local weights and measures official or authorized service agent must perform the verification procedure.

6.3 **Sealing**
6.3.1 **Physical Seals**
For jurisdictions that use the physical sealing method, the local weights and measures official or authorized service agent must apply a security seal to prevent tampering with the settings. Refer to the illustrations below for sealing methods.

![Figure 6-1. T71P Wire Seal](image)
![Figure 6-2. T71P Paper Seal](image)
![Figure 6-3. T71XW Wire Seal](image)
![Figure 6-4. T71XW Paper Seal](image)
When the scale base is attached to the indicator using a connector, it is necessary to seal the load cell cable to the indicator in some jurisdictions. The load cell sealing collar P/N 80500737 (Figure 6-5) is available as an accessory.

![Figure 6-5. T71P Load Cell Sealing Collar](image)

### 6.3.2 Audit Trail Seal (USA Only)

For jurisdictions that use the audit trail sealing method, the local weights and measures official or authorized service agent must record the current configuration and calibration event counter values at the time of sealing. These values will be compared to values found during a future inspection.

**NOTE:** A change to an event counter value is equivalent to breaking a physical seal.

The audit trail uses two event counters to record changes to configuration and calibration settings.

- The configuration event counter (CFG) will index by 1 when exiting the menu if one or more of the following settings are changed: Range, Capacity, Graduation, Power On Unit, Zero Range, Auto Tare, Legal for Trade, Stable range, Auto Zero Tracking, Modes, Units, Stable Printing Only. Note that the counter only indexes once, even if several settings are changed. The configuration event counter values range from CFG000 to CFG999. When the value reaches CFG999, the count starts over at CFG000.

- The calibration event counter (CAL) will index by 1 when exiting the menu if a Span Calibration, Linearity Calibration or GEO setting change is made. Note that the counter only indexes once, even if several settings are changed. The calibration event counter values range from CAL000 to CAL999. When the value reaches CAL999, the count starts over at CAL000.

The event counters can be viewed by pressing and holding the MENU button.

![0.000 kg](image)

While the button is held, the display will show MENU followed by Audit.

![Audit](image)

Release the button when Audit is displayed to view the audit trail information.

![CFG000](image)

![CAL000](image)

The audit trail information is displayed in the format CFGxxx and CALxxx.

![0.000 kg](image)

Then the indicator returns to normal operation.

7. MAINTENANCE

7.1 Cleaning

CAUTION: DISCONNECT THE EQUIPMENT FROM AC MAINS POWER BEFORE CLEANING.

T71P
The housing may be cleaned with a cloth dampened with water and a mild detergent. Do not use solvents, chemicals, alcohol, ammonia or abrasives to clean the housing or control panel.

T71XW
The housing may be cleaned with a cleaning solution suitable for use on stainless steel. Rinse the housing with water and dry it thoroughly. Do not use solvents, chemicals, alcohol, ammonia or abrasives to clean the control panel.

7.2 Troubleshooting

### 7.3 Service Information

If the troubleshooting section does not resolve your problem, contact an Authorized Ohaus Service Agent. For service assistance in the United States, call toll-free 1-800-526-0659 between 8:00 AM and 5:00 PM Eastern Standard Time. An Ohaus Product Service Specialist will be available to assist you. Outside the USA, please visit our website www.ohaus.com to locate the Ohaus office nearest you.
# 8. TECHNICAL DATA

## 8.1 Specifications

The technical data is valid under the following ambient conditions:

- **Temperature:** 
  - \(-10^\circ C\) to \(40^\circ C\) / \(14^\circ F\) to \(104^\circ F\)
- **Relative humidity:** Maximum relative humidity 80% for temperatures up to \(31^\circ C\) decreasing linearly to 50% relative humidity at \(40^\circ C\).
- **Altitude:** up to 2000m

**FCC Note**
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

**Industry Canada Note**
This Class B digital apparatus complies with Canadian ICES-003.

**ISO 9001 Registration**
In 1994, Ohaus Corporation, USA, was awarded a certificate of registration to ISO 9001 by Bureau Veritus Quality International (BVQI), confirming that the Ohaus quality management system is compliant with the ISO 9001 standard’s requirements. On May 21, 2009, Ohaus Corporation, USA, was re-registered to the ISO 9001:2008 standard.

**Important Notice for verified weighing instruments**
- Weighing Instruments verified at the place of manufacture bear one of the preceding marks on the packing label and the green ‘M’ (metrology) sticker on the descriptive data plate. They may be put into service immediately.
- Weighing Instruments to be verified in two stages have no green ‘M’ (metrology) on the descriptive data plate and bear one of the preceding identification marks on the packing label. The second stage of the initial verification must be carried out by an authorized and certified service organization established within the European Community or by the National Notified Body.

The first stage of the initial verification has been carried out at the manufacturer’s work. It comprises all tests according to the adopted European Standard EN 45501:1992, paragraph 8.2.2.

If national regulations limit the validity period of the verification, the user of the weighing instrument must strictly observe the re-verification period and inform the respective Weights and Measures authority.
**Disposal**
In conformance with the European Directive 2002/96/EC on Waste Electrical and Electronic Equipment (WEEE) this device may not be disposed of in domestic waste. This also applies to countries outside the EU, per their specific requirements.

The Batteries Directive 2006/66/EC introduces new requirements from September 2008 on removability of batteries from waste equipment in EU Member States. To comply with this Directive, this device has been designed for safe removal of the batteries at end-of-life by a waste treatment facility.

Please dispose of this product in accordance with local regulations at the collecting point specified for electrical and electronic equipment.

If you have any questions, please contact the responsible authority or the distributor from which you purchased this device.

Should this device be passed on to other parties (for private or professional use), the content of this regulation must also be related.

For disposal instructions in Europe, refer to [www.ohaus.com](http://www.ohaus.com), choose your country then search for WEEE.

Thank you for your contribution to environmental protection.
LIMITED WARRANTY

Ohaus products are warranted against defects in materials and workmanship from the date of delivery through the duration of the warranty period. During the warranty period Ohaus will repair, or, at its option, replace any component(s) that proves to be defective at no charge, provided that the product is returned, freight prepaid, to Ohaus.

This warranty does not apply if the product has been damaged by accident or misuse, exposed to radioactive or corrosive materials, has foreign material penetrating to the inside of the product, or as a result of service or modification by other than Ohaus. In lieu of a properly returned warranty registration card, the warranty period shall begin on the date of shipment to the authorized dealer. No other express or implied warranty is given by Ohaus Corporation. Ohaus Corporation shall not be liable for any consequential damages.

As warranty legislation differs from state to state and country to country, please contact Ohaus or your local Ohaus dealer for further details.
